1 de abril de 2019

Construir el siguiente parámetro

$$\overline{X} - t_{\frac{\alpha}{2},(n-1)} \frac{S_{n-1}}{\sqrt{n}} \le \mu \le \overline{X} + t_{\frac{\alpha}{2},(n-1)} \frac{S_{n-1}}{\sqrt{n}}$$

De donde sabemos que

- 1. $X \sim N(\mu, \sigma)$
- 2. σ^2 desconocida
- 3. n < 30

$$P(L_{1} \leq T \leq L_{2}) = 1 - \alpha$$

$$P(L_{1} \leq T \leq L_{2}) = P(-t_{\frac{\alpha}{2}} \leq T \leq t_{\frac{\alpha}{2}})$$

$$P(L_{1} \leq T \leq L_{2}) = P(-t_{\frac{\alpha}{2}} \leq \frac{\overline{X} - \mu}{\frac{S_{n-1}}{\sqrt{n}}} \leq t_{\frac{\alpha}{2}})$$

$$P(L_{1} \leq T \leq L_{2}) = P(-t_{\frac{\alpha}{2}} \frac{S_{n-1}}{\sqrt{n}} \leq \overline{X} - \mu \leq t_{\frac{\alpha}{2}} \frac{S_{n-1}}{\sqrt{n}})$$

$$P(L_{1} \leq T \leq L_{2}) = P(\overline{X} - t_{\frac{\alpha}{2},(n-1)} \frac{S_{n-1}}{\sqrt{n}} \leq \mu \leq \overline{X} + t_{\frac{\alpha}{2},(n-1)} \frac{S_{n-1}}{\sqrt{n}})$$

Construir el siguiente parámetro

$$\hat{P} - z_{\frac{\alpha}{2}} \sqrt{\frac{\hat{P}(1-\hat{P})}{n}} \le p \le \hat{P} + z_{\frac{\alpha}{2}} \sqrt{\frac{\hat{P}(1-\hat{P})}{n}}$$

De donde sabemos que

- 1. p Muestra muy geande
- 2. $n \ge 30$

$$P(L_{1} \leq Z \leq L_{2}) = 1 - \alpha$$

$$P(L_{1} \leq Z \leq L_{2}) = P(-z_{\frac{\alpha}{2}} \leq \frac{\hat{P} - p}{\sqrt{\frac{\hat{P}(1 - \hat{P})}{n}}} \leq z_{\frac{\alpha}{2}})$$

$$P(L_{1} \leq Z \leq L_{2}) = P\left(-z_{\frac{\alpha}{2}}\sqrt{\frac{\hat{P}(1 - \hat{P})}{n}} \leq \hat{P} - p \leq z_{\frac{\alpha}{2}}\sqrt{\frac{\hat{P}(1 - \hat{P})}{n}}\right)$$

$$P(L_{1} \leq Z \leq L_{2}) = P\left(\hat{P} - z_{\frac{\alpha}{2}}\sqrt{\frac{\hat{P}(1 - \hat{P})}{n}} \leq p \leq \hat{P} + z_{\frac{\alpha}{2}}\sqrt{\frac{\hat{P}(1 - \hat{P})}{n}}\right)$$
